

### Abstract

The invention relates to a method for determining a steering torque which acts when a steering wheel is activated in motor vehicles.

5 In a motor vehicle, the steering torque which acts when a steering wheel is activated is determined. The motor vehicle here is in particular a motor vehicle whose steered wheels are driven. In this context, according to one method according to the invention the  
10 interference torque component ( $M_{\text{stör}}$ ), based on interference influences, of the steering torque is determined. A steering torque ( $M_{\text{soll}}$ ) with reduced interference force, in particular free of the influence of an interference force, is then generated at the  
15 steering wheel by means of a torque generator (108).
